

**Table 2C** contains the historic estimates of population and housing units with related (or contributed) input data from different sources. This profile sheet is helpful in evaluating the estimates and important for communications. Please update the name of the contact person, address, phone/fax numbers and email address if there are any changes.

- I. **CDLGs (Colorado Division of Local Government) Estimates** show historic county and/or municipal estimates for our population, household, and housing unit variables. **The draft population and housing unit estimates for July 1, 2005** are shown under the column heading of 7-1-2005.
- II. **Housing Indicators** show Thu (Total Housing Unit) changes and previous CY (Calendar year) BPU (Building Permit Unit). If the figures on the two time series are not identical, the difference is caused by incorporating input data from Sections II, III or IV. Local BPUs were used where available. Where locally provided COUs (Certificates of Occupancy) were available, the COUs were used in place of the BPU's as new housing units. On the second line, new Census Bureau (USCB) data for 2005 CY BPUs has been added for 7-1-2006. Please review this data as well. We will need this information by March 1, 2007 for the 7-1-06 population estimates..
- III. **Annexation** – Any changes due to annexations.
- IV. **Local Canvass/Estimates** – Any local input from estimate, survey, or canvassing.
- V. **USCB's Estimates** - The U.S. Census Bureau's estimates are included for comparison only. They use different methodologies and procedures for their estimates.
